My Farm

Make informed decisions about your farm.
The data shown in Farm Information gives detailed statistics about your crops and stock, while Farm History keeps track of every single action carried out.

We provide a comprehensive map of the country through industry leader ArcGIS. And we let you upload a map of your own farm, ensuring that relevant information is up-to-date when you need it.

Take control of your farm by dictating the size of your paddocks and blocks with our land area units (LAUs).

- Specify the vegetation, soil type, and topography.
- Select which block(s) each paddock belongs to.
- Use management zones to select multiple blocks or paddocks at once.

Not only can you create your own LAUs, but previously-created shape files can be imported straight into HawkEye, so you can get started immediately and farm more efficiently.

Farm Info

Seeing your farm data at a glance is an important part of managing on-farm activities. In some circumstances viewing this data in a table may be more effective than on the map. Your Farm Information page displays key data such as the paddock names and areas, as well as the most recent events recorded on your farm.

A number of useful tools are also available, allowing you to easily manage the details for all your land areas as well as manually recorded events.
