Senior GIS Utilities Consultant, Wellington, or Auckland

Eagle Technology is the distributor of the world's leading Geographic Information Systems (GIS) software products and services.

This role offers a significant level of variety and you will have the pleasure of having first hand input into helping our utilities customers achieve success with your ability to apply your GIS and data management expertise to quickly understand a customer's business, the challenges they face and be able to convert that into actionable outcomes.

An attractive package is available for the right candidate with the requisite motivation to deliver outstanding results for our customers.

Esri expertise is preferred, but not essential.

Key Responsibilities

- Provide guidance and advice to customers and colleagues on the application of Esri GIS technology with a focus on utilities
- Plan and support data and technical migrations from competitive GIS technologies into Esri technology
- Undertake GIS implementations in a best practice manner
- Provide technical leadership of GIS implementations
- Peer review project artefacts and technical deployments
- Support in development of business opportunities
- Undertake business analysis of customer requirements

Key Requirements

As this is a senior position, experience within a consulting role is essential as you will be dealing with a range of external clients. Key skills and experience are as follows:

- Bachelors or Master's Degree in computer science, GIS, or related field
- Thorough understanding of database structures including data models, data schemas, database principles, data manipulation and conversion approaches, data delivery methods
- In depth knowledge of Enterprise GIS Platforms with preference given to candidates with experience delivering solutions with the Esri suite of products including ArcGIS Online, ArcGIS Enterprise and ArcGIS Desktop and/or other competitive GIS products to same level.

- 10 or more years of experience and a proven track record of implementing, administrating, or applying GIS concepts using Esri technology or Competitive technology in various industry domains and technical environments
- Strong problem-solving skills
- Self-motivated, proactive, creative and team orientated
- Exceptional interpersonal, written and verbal communication and presentation skills
- A customer focused approach

If you are interested in exploring this opportunity in more depth, please email your CV, contact details, availability (for both interview and job commencement) and an indication of your salary expectations to : **jane_crawford@eagle.co.nz**

All applications will be treated in utmost confidence.
