GIS Cloud Architect, WELLINGTON

Eagle Technology is the distributor of the world's leading Geographic Information Systems (GIS) software products and services. With a team of experienced, trained, and passionate GIS professionals, we deliver and support the best geospatial and IT solutions to organisations in both the public and private sectors throughout New Zealand.

The primary responsibility of the Cloud Architect is to cover all the technical aspects of GIS Managed Services cloud architecture, including the system design and ensuring solutions adhere to the designed architecture during development and deployment phases, and that our solutions are aligned with emerging Esri and cloud native technology.

Candidates will have extensive experience in architecting enterprise wide cloud (AWS and Azure) infrastructure and software implementations, that involve integration with other core systems. They will also be familiar with the latest trends in technology to enable best practice for safe, secure and robust solutions to be implemented.

This role will sit within our growing Managed Services team to create GIS cloud solutions and designs that provide value to multiple customers while minimising the impact to support structures and models.

If you are interested in exploring this opportunity in more depth, please email your CV, contact details, availability (for both interview and job commencement) and an indication of your salary expectations to : **jane_crawford@eagle.co.nz**

All applications will be treated in utmost confidence.
